Sorry, we were all working on it with OGC trying to figure out what ones we can actually close out.

I'll add this one in.

Thanks a bunch!

Okay. Sandy (cc'd) will be taking over my duties as of tomorrow afternoon. So, please include her on this moving forward. Also, I was wanting to update on the question on Sunnyside, if you can put this in:

The Sunnyside Gold Corporation, pursuant to its mining permit and an agreement with the State of Colorado, installed bulkheads in the American Tunnel in several locations in the late 1990s and early 2000s. The American Tunnel drained the Sunnyside Gold Mine workings during the

mine's operating years. When the bulkheads were installed, water elevations rose in the mountain and flooded the Sunnyside Gold mine workings. EPA understands that the water levels in mine pool have been stable for several years. The Colorado Division of Reclamation, Mining and Safety (DRMS) would be a good resource for additional information and estimates on volume.

We have no information indicating an immediate risk of a release from the Sunnyside Mine. EPA will be working with our partners at DRMS to evaluate the Gold King Mine release and its impact on conditions in the area to determine if additional measures are necessary to address potential discharges.

The relationship between the water in the Sunnyside Gold Mine and other mines in the area is a complex topic. Many of the mines in the area either intersect the same geologic structures and/or are in close proximity to the same structures. The DRMS has extensive knowledge and details on Sunnyside and other mines in the area, and that information has been the subject of extensive discussion and review with EPA and the Animas River Stakeholder Group (ARSG) over the last several years.

I can only imagine. I'll be on it for a while. We're meeting with ORC/OGC/OCIR in a bit and I'll be updating it based on what's ready to go/has gone.

Thanks again!

Yeah, I feel your pain. It was even worse on the shoddy wireless network we had at the previous UAC.

I really don't like working in Excel online.

Thanks!
